cc and their corresponding secreted proteins are useful for preventing, cc treating or ameliorating medical conditions, e.g., by protein or gene clearing or ameliorating medical conditions, e.g., by protein or gene conterapy. Pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the camount of the new genes. Specific uses are described for each of the candinal include developing products for the diagnosis or treatment of candinal include developing products for the diagnosis or treatment of candinal include developing products for the diagnosis or treatment of the conditions autoimmune diseases (e.g., reumatoid arthritis), inflammation, cc AIDS, autoimmune diseases (e.g., reumatoid arthritis), inflammation, cc disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cc ardiovascular disorders, angiogenic disorders, stinzophrenia, asthma, skin cc disorders, and infections. The proteins can also be used to aid wound ce disorders, and infections. The proteins can also be used to aid wound condition or paint before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used can a food additive or preservative to modify storage properties.

Cc Antibodies specific for a protein of the invention can be used in diagnostic immunoassays (ELISA). The present sequence represents a human cc ancreted protein fragment referred to in the disclosure of the invention cc secreted protein fragment referred to in the disclosure of the invention cc secreted protein fragment referred to in the disclosure of the invention cc. AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                    AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the represence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's Parkinson's diseases and cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; binding partner identification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC abnormalities, haematopoietic disorders, diseases of the immune system, CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC altergies, neurological disorders (e.g., Alzheimer's disease, CC Parkinsons's disease), cognitive disorders, schizophrenia, asthma, skin CC cardiovascular disorders, sepsis, diabetes, atherosclerosis, CC cardiovascular disorders, angiogenic disorders, kidney disorders, CC gastrointestinal disorders, pregnancy-related disorders, andocrine CC disorders, and infections. The proteins can also be used to aid wound CC suburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used CC as a food additive or preservative to modify storage properties.

CC Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and con the invention seasy or enzyme linked and contains and can be used and contains or immunoassave.

                                                                                                                                                                                                                                                                                                                                                           The invention relates to Willebrand Factor A domain related protein (WARP) which is a member of von Willebrand Factor A (VA) domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The

```
The invention relates to Willebrand Factor A domain related-protein (WARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal constant of the contraction of th
                                                                                                                                                                                                                                                       New isolated Willebrand Factor A-Related Protein polypeptide useful for
the manufacture of a medicament in the treatment of a disease condition
of the extracellular matrix, in particular arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2003-111873/10.

The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is human VA domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC amount of the new genes. Specific uses are described for each of the CC mutations in the new genes. Specific uses are described for each of the CC spenes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC abnormalities, haematopoietic disorders, diseases of the immune system, CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, CC AIDS, autoimmune diseases, concert tumours, foetal and developmental CC disorders (e.g., psoriasis), sepsis, diabetes, atherosciences, CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC gastrointestinal disorders, pregnancy-related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound CC mburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

CC alleviating symptoms associated with the disorders mentioned above, and in disgnostic immunosorbent assay (ELISA). The present sequence represents a human cC secreted protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, dispetive disorders, dispetive disorders.

cc cardiant, noctropic, antilipaemic, nephrotropic, uropathic, anabolic, cardiant, noctropic, antilipaemic, nephrotropic, uropathic, anabolic, compresentive, and vulnerary. The albumin fusion protein nucleic acid may compresent in gene therapy to treat disorders. The albumin fusion protein is useful for diagnosing, treating, preventing or ameliorating diseases or disorders comprising indication: Y. The diseases or disorders include: cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer), commune or haematopoietic diseases (e.g. anaemia, Hodgkin's disease, acute limmune or haematopoietic diseases (e.g. arthritis, asthma, AIDS, cardiomune disease, inflammatory bowel disease, psoriasis or Lyme CC autoimmune disease, inflammatory bowel disease, psoriasis or Lyme CC disease), reproductive system disorders (e.g. prostatitis, inguinal hernia, varicocele, penile carcinoma, ovarian adenocarcinoma or Sertoliclydig tumours), musculoskeletal disease (e.g. giant cell tumours, CC laydig tumours), musculoskeletal disease (e.g. rhabdomyomas, heart disease, garrhythmia, cardiac arrest, heat valve disease, hypernatraemia or carchevia), misculos arrest, heat valve disease, hypernatraemia or carchevia, miscular arrest, heat valve disease, hypernatraemia or carchevia disease arrest, heat valve disease, hypernatraemia or carchevia disease (e.g. rhabdomyomas, heart disease).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            disorder in a patient comprising the step of administering the albumin fusion protein; a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: X, or its fragment or variant; a method of extending the shelf life of Therapeutic protein: X, or its fragment or variant; a nucleic acid molecule comprising a polynucleotide sequence encoding the albumin fusion protein; a vector comprising the nucleic acid molecule of the albumin fusion protein; and a host cell comprising the nucleic acid molecule of the albumin fusion protein. The albumin fusion protein and its compositions have the following activities: cytostatic, antianemic, antiarthritic, antiasthmatic, antischmatic, dermatological, antigout, immunoscoplator, antiarrhythmic, nartigout, nartigout, immunoscoplator, antiarrhythmic, partigon, antigout, immunoscoplator, antiarrhythmic, partigon, carrier antilinearic nantiarrhythmic, immunoscoplatic, dermatological, antigout, immunoscoplator, antiarrhythmic, partigon, antigout, antigout, immunoscoplator, antiarrhythmic, partigon, antigout, antig
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12-APR-2000;

AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the protein in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                    Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's Parkinson's diseases and cancers.

gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            appormainties, haematopoietic disorders, diseases of the immu AIDS, autoimmune diseases (e.g., rheumatoid arthritis), infil allergies, neurological disorders (e.g., Alzheimer's disease partingons's discount descriptions (e.g., Alzheimer's disease)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC proliferative disorders, cancer, tumours, foetal and developmental CC abnormalities, haematopoietic disorders, diseases of the immune system, CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC allergies, neurological disorders, schizophrenia, asthma, skin CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC gastrointestinal disorders, pregnancy-related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound CC disorders, and epithelial cell proliferation, to prevent skin aging due to CC sumburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used CC as a food additive or preservative to modify storage properties.

CC Antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked CC immunosorbent assay (ELISA). The present sequence represents a human CC secreted protein fragment referred to in the discolosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ni J, Baker KP

                                                                                                                                                                                                                                                                                                                     XXXXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      which encode human secretory or membrane proteins represented by AAB88317

- AAB8419. Included in the invention are primers AAF9317 - AAF94295 and AAF62232 - AAF62235 which are used to isolate the cDNA sequences of the cinvention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polymucleotide sequences can be used in gene therapy. The polymucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The
                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                            membrane proteins, and their coding sequences. The present sequence is one such protein sequence. The coding sequences of the invention are useful for examination and diagnosis of abnormality of the human secretary proteins and in gene therapy methods. The coding sequences and proteins are useful as candidates for medicines or as target molecules for developing medicines. Antibodies against the proteins of the invention are useful for treating diseases that are associated with the proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained from sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The

                                                                                                                                                                                              The invention relates to Willebrand Factor A domain related-protein (WARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Willebrand Factor A domain extracellular matrix; ECM;

The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-CC ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences: The polynucleotides are useful for central protein or complementary sequences: The polynucleotides are useful for cencoded polypeptides (ABP68902-ABP69849) are useful as molecular weight cencoded polypeptides (ABP68902-ABP69849) are useful as molecular weight cencoded polypeptides (ABP68902-ABP69849) are useful as molecular weight comarkers, as a food supplement, for generating antibodies; in medical comparing, screening and diagnostic assays and for treating cell-cc proliferative disorders (cancer), neurodegenerative diseases (Parkinson's cor Alzheimer's disease), autoimmune diseases (multiple sclerosis, cor Alzheimer's disease), autoimmune diseases (multiple sclerosis, cor alzheimer's disease), autoimmune diseases (multiple sclerosis, cor alzheimer's diseases), autoimmune diseases (multiple sclerosis, cor alzheimer's diseases), autoimmune diseases (multiple sclerosis, cor alzheimer's diseases, autoimmune diseases, autoimmune diseases (multiple sclerosis, cor alzheimer's diseases, a

treating NOVX polypeptides and nucleic acid molecules useful for preventing NOVX-associated disorders, e.g. cancer, diabetes, infection or and in chromosome mapping, tissue typing or pharmacogenomics. 9

SEQ ID NO 2; 1880pp; English.

antilipaemic activity, and may have a use in gene therapy, and as a vaccine. The polypeptides are encoded by NOVX polynucleotides comprising any of the 303 fully defined nucleotide sequences given in the specification. The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome X or dyslipidaemias. The nucleic acids are The invention relates to a novel isolated polypeptide (NOVX). A polypeptide of the invention has cytostatic, immunomodulator, neuroprotective, nootropic, anorectic, antidiabetic, antimicrobine hybridisation probes, chromosome mapping, tissue antimicrobial, and

The XMAD is used for screening a compound for effectiveness as an agonist or antagonist of XMAD. The identified agonist or antagonist are used for treating a disease or condition associated with decreased or increased expression of functional XMAD. The polynucleotides encoding XMAD are useful in somatic or germline gene therapy to correct a genetic deficiency, to express a conditionally lethal gene product and to express a protein which affords protection against intracellular parasites and also for diagnosis of disorders associated with expression of XMAD. They are also used for generating

                                                                                                                                                                                                                                                                                                                                                                       anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, disorders, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic;

The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The
                                                                                                                                                                                                                                                                                                                                                  The invention relates to Willebrand Factor A domain related-protein (WARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an
                                                                                                                                                                                                                                      Sequence 180 AA;

                                                  The invention relates to Willebrand Factor A domain related-protein (MARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is mouse WARP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated Willebrand Factor A-Related Protein polypeptide useful for
the manufacture of a medicament in the treatment of a disease condition
of the extracellular matrix, in particular arthritis.
